Alanna and all,

Please see attached revised version of the newsletter. We don't have the Spanish version of this yet. If possible please print the English version first.

Thank you, Barbara
Portland Harbor Community Advisory

Hello Barbara – I could have copies printed in English and Spanish. However, as with the previous newsletter, 1 week processing time is needed for a print job.

Please see the edits provided on the process schedule (4 comment boxes inserted in the PDF). The information below may further clarify the comments in the boxes.

Let me know the anticipated date you will have the final in English and Spanish. Thanks, Alanna.

Please note the proposed plan and record of decision (ROD) are two different documents. The ROD explains which cleanup alternatives will be used at NPL sites. It contains information on site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, description of the response actions to be taken, and the remedy selected for cleanup. The development of the ROD also includes consideration of how the site could be used in the future. EPA will issue a public notice through the local media to notify the community that the ROD is available for inspection. *If* changing the ROD is necessary, EPA will develop a proposed ROD amendment, issue a public notice through the local media to notify the community, and hold a public meeting to discuss the proposed changes and to take comments. EPA then develops a Responsiveness Summary to formally respond to public comments received.

Information on the remedial design/remedial action phase. This phase of the process includes preparing for and doing the bulk of the cleanup at the site. EPA develops the final design for the cleanup. Throughout this phase, EPA community involvement staff will keep community members advised about the progress of the cleanup through periodic public events, newsletters, fact sheets, and presentations to civic groups, schools, and local leaders.

Opportunities for Community Involvement during remedial design/action:

- Learn about the final design for the cleanup by attending public events.
- Partner with EPA to host meetings/events to stay informed about the progress of the cleanup.
- Attend periodic public events about progress at the site.

Subject: PHCAG newsletter revised

Hi Alanna,

Attached is a pdf newsletter *The Willamette Insider*. It's shorter and simplified, only 2 pages, front to back. The superfund process diagram has been revised per EPA concerns.

Do you think it would be possible for EPA to print some in English and some in Spanish as soon as we get the translation?

thx, Barbara
